Product Data Sheet
Transpoxy Intermediate 2.19

Product description.
A polyamide cured epoxy coating suitable for atmospheric and immersion conditions. The product is especially suitable as an intermediate coat between organic- and inorganic zinc-rich primers and the final topcoat. Can be recoated with all Transocean Finishing series.

Physical properties.

Application data.
Mixing ratio
By weight, base to hardener: 87 to 13.
By volume, base to hardener: 80 to 20.

Potlife
10°C: 12 hours, 23°C: 8 hours, 30°C: 6 hours.

Guiding data Airless spray
Pressure at nozzle: 120 -180 bar. Nozzle size: 0.48 - 0.66 mm.
Spray angle: 40 - 80 degrees. Volume of thinner: 0 - 3%.

Guiding data Airspray
Pressure. 3 - 5 bar. Nozzle size: 1.5 - 2.0 mm.
Volume of thinner: 0 -10%.

Brush/Roller
Suitable. Multicoats may be needed to achieve the specified dry film thickness.
Volume of thinner: 0 - 5%.

Thinner/Cleaner
Transocean Epoxy Thinner 6.03.

Conditions
Humidity: below 90% RH.
Temperature of the paint before application: min: 10°C, max: 30°C.
Substrate temperature: min: 10°C, max: 35°C.
The temperature of the substrate should be at least 3°C above the dew point of the air. Air temperatures and relative humidity must be measured in the vicinity of the substrate.

Drying and recoating times.

(1) The surface should be dry and free from contaminants prior to overcoating. The best intercoat adhesion is achieved when the subsequent coat is applied before the preceding coat is fully cured. After prolonged exposure times it may be necessary to roughen the surface to ensure intercoat adhesion. When recoating with single pack products, maximum recoat interval is limited to 16-24 hours. When in doubt, consult your nearest Transocean office.
Surface preparation.

Coated substrates Oil and grease should be removed by solvent cleaning according to SSPC-SP1. Remove weld spatter and smooth weld seams and sharp edges as applicable. Remove salts and dirt by fresh water washing. Corroded and/or damaged areas should be repaired first with an appropriate primer system.

Inorganic Zinc Silicates Remove zinc-salts and ensure that the zinc silicate has been fully cured. Apply a mist coat of Transpoxy Intermediate 2.19 first.

Recommended paint system.

A typical system for atmospheric exposure is shown below.

Worldwide availability

The product is part of the common Transocean product range but local availability is subject to confirmation. Although we strive to supply the same product through the world, slight modifications of the product in some cases may be necessary in order to comply with local conditions and/or national regulations. In such cases an alternative datasheet will be issued.

Health and safety.

Observe the precautionary notices on the label of the container. A material safety data sheet is available upon request and national or local safety regulations should be followed. This product is intended for use by professional applicators.

As a general rule, avoid skin- and eye contact by wearing overalls, gloves, goggles, mask, etc. Spillage on the skin should immediately be removed by thorough washing with lukewarm water and soap or a suitable industrial cleaner. Eyes should be flushed with fresh water and medical attention sought immediately.

Spraying should be carried out under well-ventilated conditions. Avoid inhalation of solvent vapours and paint mist by wearing an air mask.

This product contains flammable materials and should be kept away from sparks and open flames. Smoking in the area should not be permitted.

Disclaimer

The information in this data sheet is provided to the best of our knowledge. However, we have no control over either quality or condition of the substrate and other factors affecting the use and application of this product. Therefore, we cannot accept any liability whatsoever or howsoever arising from the performance of the product or for any loss or damage arising from the use of this product. We reserve the right to change the product without notice.

Date of issue: November, 16.
